

Align lower right corner of grid with search area's latitude & longitude coordinates on sectional chart.

## **Sectional Grid Overlay Printing Instructions**

This grid overlay is designed to be printed on Transparency Film. For best results choose film that is compatible with your printer.

The reverse printing allows you to print on the coated side of the film. The smooth side of the transparency is then on top when in use. This allows you to place the overlay on the sectional chart and write on it with grease pencil or dry erase marker without damaging the printed grid.

This grid overlay is designed for use between 36 and 44 degrees North Latitude. The grids will not fit properly at other latitudes due to the curvature of the earth.

To avoid printing this instruction page on transparency film, select  
Print Range: Pages 1

Do not reduce or enlarge the size when printing. In Page Handling select  
Page Scaling: None
